Topic : Research by Design

ABSTRACT

Researchers have always been advised that the key to good research is “study, study, and study.” But how to get the most out of our studies? The issue that this seminar addresses is the lack of compositional approaches for designing research projects among young researchers. To address this issue, the objectives of this seminar are to promote on an international level systematic research in Science, Technology, Engineering, and Mathematics (STEM), with emphasis on the exchange of information and opinions, for the discussion of problems that may affect STEM research. The methods suggested in this seminar will serve as encouragement and inspiration not only for young researchers, but also the experienced researchers, who are looking for a fresh paradigm.
