**Topic : Cyber security awareness level among
students in Malaysia**

ABSTRACT

The aim of this review is to highlight the status of cyber security awareness level among students in Malaysia. This review reveals that the cyber security awareness level among Malaysian student is still low and they are exposed to many cyber threats. To this end, empirical studies that assessed the cyber security awareness level in Malaysia were mainly conducted among higher learning institution students, who were reported to be avid Internet users and at the same time lack executable knowledge in combating cyber threats.

Keywords: cyber threat; cyber security; university; school; review
